
MODULES

1. Registration Page:

- **User:** In registration page user can register himself/herself in the system for getting services by filling some details like email, name, age etc.
- **Nurse:** Same way nurse can register herself by accepting some policies and giving her details like name, email id, her experience, her RN number to check whether she is certified nurse or not. If all the details are correct then she will be able to register in system else if her request will be denied.

2. Log-in Page:

- **User:** Once user registered himself/herself then he can login in system from anywhere and on from any device by just entering mail-id and password.
- **Nurse:** Same applied to nurse also once she registered herself/herself then she can login in system from anywhere and on from any device by just entering mail-id and password.
- **Admin:** The mail-id and password will directly provide to admin by system only, he/she just need to enter this and can login in system from anywhere and from any device.

3. Notification Page:

- **User:** In notification Page all the types of notifications such as did nurse accept the users request, notify the user before one hour of service that nurse is arriving so in case if user want cancel the service he can cancel but not one hour before the service.

- **Nurse:** Just as user nurse will also get notifications like she got accepted for providing services, who send her request for providing services, confirmation notification one hour before service.
- **Admin:** Admin will also get notification about the nurse who wants to get registered in system. After getting the notification admin will check whether the nurse is genuine or not.

4. Search :

- **User:** In search page user has to enter his/her location and what kind of service they want. Once user enters this it will show the list of nurse who will be able to provide that service in that entered location.

5. Patient Request Forms Page:

- This will contain request forms created by a patient/User. Here patients can create a new request form or choose an already created form for giving a request to a nurse.

6. Accepted Request Page:

This will contain all the accepted requests of the patient with a nurse with the appropriate service status (Pending, Service Time, Completed, Expire).

- **User:** With above, it also contains requested nurse info, its own request form, cancel & payment options to patients.
- **Nurse:** Addition to above, it also contains the cancel option, patient's request form to nurse and checkbox for offline payment if the patient has selected it.

7. Payment:

- **User:** Patient/User can do the payment in two ways:
 - Online: In this approach, patients will pay in our system account and we will pay to nurses when they request for it.
 - Offline: In this approach, the patient has to first select offline payment and then the nurse has to check for it, if she gets her money.

8. Nurse Wallet:

- **Nurse:** Through this nurse can withdraw her earned money from the system account. For that, the nurse has to provide her bank account details to us.

9. Profile Page:

- **User:** In profile page, user can view his/her profile and his/her current services which is going on. Moreover, he can update his profile if needed and delete account if he/she willing too.
- **Nurse:** Here nurse can view her profile and her scheduled services of a week. Moreover, she can also update/delete her profile if she is willing too.

Roles and Responsibility of user

1. Admin:

- Admin can view the profile of the nurse to check his/her qualification.
- If qualification meets the requirement, then admin will accept the nurse request or it will be denied.

2. Guest User:

- Guest user can view the user-based interface without login in.
- Guest User are able to surf the user interface without login in.
- But guest user will not able to book a service unless and until he/she logged in.
- Guest User can view functionalities like short term service, search nurse by area.

3. Nurse:

- If Nurse agrees to the terms and conditions then she will be able to make profile.
- If admin accepts the nurse's profile he/She has to pay 1000 as per agreement.
- Nurse can withdraw the money online at any point of time.
- Nurse will enter the area where she can provide service.
- He / She will update their available time slots for service in profile every week.
- He / She can accept or deny the request sent by user according to their satisfaction.

- If the nurse didn't visit the patient after booking a service then their account will be disabled and the deposit of 1000/- will not be refundable.
- Moreover, she has to confirm in the system that user/patient paid the bill of his/her service in case of offline payment.

4. User:

- User will log-in the system so that he/she could request for a particular service.
- User will search for nurse using a particular area, service.
- User will send request to nurse along with a form that has all the details of patient and service to be provided.
- User will pay for the service online/offline as per his convenience.
- User can cancel the service any time if needed, but not before one hour of the service
